Requirement ID	Description	Story Points	AC ID	Acceptance Criteria	Verification Method
1.1	Create a home screen that displays when the application is opened	13	1.1-1	Home screen appears at launch	Launch the application and verify the home screen appears
			1.1-2	Title is displayed on home screen	Check that the title appears on the home screen
			1.1-3	No crashes or errors	Launch application and verify it opens without errors.
2.1	Create database to store physical media collection	5	2.1-1	Database is successfully created	Check that the database exists
			2.1-2	Database contains a media table and a user feedback table	Open the database and verify both tables exist
			2.1-3	Media tables contain fields for basic media information	Check that table contains fields like media_id (pk), title, media type, format, and media-specific details
			2.1-4	User feedback table contains fields for user feedback	Check that table contains fields like feedback_id (pk), media_id (fk), notes, and ratings
			2.1-5	Database can be opened without any errors	Open database and verify no errors.
			2.1-6	Primary and foreign keys to connect all tables	Verify that each table has a primary key and user feedback table has a foreign key connecting the two tables.
			2.2-1	Application can access Media table.	Run a query from the application that counts the records in the Media table. Verify that a number is returned, even if the table is empty.

2.2	Connect application to the database	8	2.2-2	Applcation can access the User Feedback table.	Run a query from the application that counts the records in the UserFeedback table. Verify that a number is returned, even if the table is empty.
			2.2-3	Application can save a test media item to the database.	Use the application code to insert a sample media item. Open the database and verify that the item was saved with the correct information.
			2.2-4	Application can retrieve data from the database.	Run a query from the application to retrieve the sample item added in 2.2-3. Verify that the returned information matches what was saved.
